Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance: The present invention is drawn to a method for a mobile station to detect and estimate radiation power. The closest prior art of record MacDonald et al. (MacDonald), U.S. Patent Application Publication No. 2004/0152471 discloses methods and apparatus for mobile station location estimation. The prior art further discloses a method for locating a mobile station comprising the following steps: obtaining a current mobile station (mobile telephone) location [0048]; generating a base station combination and corresponding base station information (MAHO list), wherein the base station combination and the corresponding base station information are retrieved by searching in a first database (the MSC stores these MAHO lists) while using location information of a serving base station as a search index (the appropriate list is sent to the mobile telephone depending on the serving cell site), the base station combination comprising the serving base station and nearby base stations close to the serving base station (the MAHO lists contains the signal strengths of the cells adjacent to the serving cell) [0046]; and calculating a distance between the mobile station and each base station listed in the base station combination according to the current mobile station location and the base station information in the base station combination [0052]. The prior art fails to disclose a method for a mobile station to detect and estimate radiation power received thereby, comprising the following steps: estimating total radiation power by substituting calculated distances into a predetermined equation; checking whether the total radiation

power is greater than a preset minimal safety value; and informing the mobile user if the total radiation power is greater than the preset value as required in the invention. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Smolik, U.S. Patent No. 6,119,005 discloses a system for automated determination of handoff neighbor list for cellular communication systems.

Stein et al., U.S. Patent Application Publication No. 2003/0008669 discloses a method and apparatus for estimating the position of a terminal based on identification codes for transmission sources.

Dutta et al., U.S. Patent Application Publication No. 2005/0170834 discloses a systems and methods for handover between space based and terrestrial radioterminal communications.

Haartsen, U.S. Patent No. 5,491,837 discloses a method and system for channel allocation using power control and mobile-assisted handover measurements.

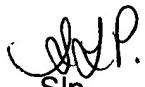

Uehara et al., U.S. Patent No. 6,477,380 discloses a system and method for estimating location of mobile station.
